### Clarifier/Thickener Maintenance

With a long history in supplying clarifiers and thickeners, Waterex has the expertise to provide servicing throughout the equipment's lifecycle. With experience in upgrading, modifying, repurposing and maintaining settlers, Waterex's capabilities can provide Lifecycle Maintenance and Support.

Our strong background in solid-liquid separation allows us to provide comprehensive support for Waterex and other suppliers units. Feel free to contact Waterex to talk to us about a servicing plan for your assets.

### Installation of Clarifiers at Talloman

Waterex has recently completed installation of a four clarifier system located at Talloman, Western Australia.

Waterex designed the units to meet the client's specifications of a nominal tertiary effluent flowrate of 8.3m<sup>3</sup>/hr. Installed as an upgrade to the existing plant, the system is designed to reduce the solids content in the effluent stream. Using proprietary technology, the design allows for air addition to collect a floating scum and the removal of an underflow solid.

Fabricated in Thailand, Waterex completed a trial assembly of the units at the fabrication facility resulting in a short, three week, site installation.

Our long-standing relationship servicing abattoir and rendering clients gives Waterex the expertise and knowledge to customise DAF or settler solutions to exceed client expectations. We look forward to further projects in this industry.
